### **Recommendations (optional):**

As most physical and technical controls of Botium Toys are compliant to all laws and regulations, we can focus on the administrative controls of the company. Botium Toys need to ensure proper confidentiality of their stored PII/SPII by encrypting using AES algorithm, which is recommended by NIST. Furthermore, Creating a proper user control policies by implementing separation of duties and principle of least privilege concepts. Some examples of this is by using role-based access(RBA) and Mandatory-based access(MBA) controls to ensure the secured data to be accessed by authorized employees. Also, password policies should also be updated to extend the 8 characters minimum to 12 characters, implementing a multi-factor authentication system and using a password manager to prevent password fatigue. By following this recommendations, it is guaranteed that Botium Toys will be GDPR, PCI DSS , SOC type 1 and type 2-compliant.
